IDEATION
PLASMA DONAR APPLICATION

PROBLEM STATEMENT:

- In order to bring awareness about plasma donation and to make a separate database for plasma donor we came up with this idea.
- It is not that people do not want to donate plasma, but because they have no idea where they can donate and what are the advantages they acquire. Actually, plasma fights back against diseases and build a good immune system among the people.
- It maintains the blood pressure by maintaining the ph level, so we will have a good immune system is built in our body.
- Despite advances in technology, today's plasma bank systems are running in manual system. There is a lack of efficiency because it is still paper-based in collecting information about donors, making a call.
- Hence, a web-based plasma donar application is needed to address these issues and problems.
